PORTABLE AIR COMPRESSOR STATISTICS PROGRAM
PRODUCT DEFINITIONS
(Updated 5/16/06)

Portable Air Compressor

A self-contained unit with or without fuel tank. A unit consists of an air compressor, prime mover (driver or power source), cooling system, and starting system. Additionally, reciprocating compressors are equipped with an air receiver and oil flood rotary units are equipped with an oil-air separator system, which also acts as an air receiver. Since skid-mounted units are easily made by removing the portable running gear, they will be classified with the portable units.

Reporting Classification: Cubic Feet CFM & PSIG
