Mounted Breakers
A Mounted Breaker is a hydraulic breaker that is mounted on an excavator, back-hoe, mini-excavator, skid steer or compact utility loader. Breakers are often used in concrete demolition projects involving bridge decks, and foundations. The amount of work accomplished using these methods depends on the hammer size, strength of the concrete, the amount of steel reinforcing used in the concrete and working conditions.

Boom Systems
Boom systems are utilized primarily with hammer applications for secondary breaking at crushers, gyratory, grizzly, jaw and mobile crushing systems and other application as above. Reach will be defined as the center of boom base with boom in the horizontal position, if boom is telescopic extended all the way out, with the hammer vertical. OR: the center of boom base to the center of the stick/dipper pin with boom out in ground level horizontal position.
